

Business Requirements Document

Learning Management System (LMS)

Introduction

The purpose of this document is to define the business requirements for a Learning Management System (LMS). The system will provide a centralized digital learning platform where administrators, instructors, and students can manage and participate in online educational activities.

The platform will support course management, student enrollment, learning content delivery, assignments, quizzes, progress tracking, and communication between instructors and students.

Business Objectives

- Provide an online learning platform for students and instructors
- Centralize course and learning material management
- Enable digital course enrollment and participation
- Improve accessibility to educational resources
- Automate assignment and quiz management
- Track student learning progress
- Improve communication between instructors and students, admin to instructor, and student to student.

Business Requirements

BR-01: User Registration and Authentication

The system shall allow users to register and access the platform based on assigned roles.

Business Need

The organization requires a secure and role-based platform to manage access and responsibilities.

Expected Outcome

- Secure user access
- Role-based system operations
- Centralized user management

BR-02: Course Management

The system shall allow instructors and administrators to create and manage courses.

Business Need

The organization requires a centralized structure for managing educational courses and learning resources.

Expected Outcome

- Organized course management
- Consistent course information
- Easier course administration

BR-03: Student Course Enrollment

The system shall allow students to enroll in available courses.

Business Rules

- Students may only enroll in active courses
- Enrollment may require approval based on course settings
- Enrollment records shall be maintained

Business Need

Students require a streamlined process to participate in learning programs.

Expected Outcome

- Simplified enrollment process
- Accurate enrollment tracking & learning accessibility

BR-04: Learning Content Management

The system shall allow instructors to upload and organize learning materials within courses.

Learning Materials May Include

- Video Lessons
- PDF Documents
- Notes
- External Resources (link/audio/images)

Business Need

Instructors require a centralized method to distribute educational content digitally.

Expected Outcome

- Organized learning resources
- Improved student access to materials
- Consistent content delivery

BR-05: Assignment Management

The system shall allow instructors to create assignments and students to submit assignment responses.

Business Rules

- Assignments may include submission deadlines
- Students may upload files as submissions
- Instructors may review and grade submissions

Business Need

The organization requires a structured digital assignment workflow.

Expected Outcome

- Simplified assignment handling
- Centralized submission management
- Improved evaluation process

BR-06: Quiz and Assessment Management

The system shall allow instructors to create quizzes and assessments for enrolled students.

Quiz Features

- Multiple-choice questions
- Timed assessments
- Automatic scoring

Business Need

The organization requires online assessment capabilities to evaluate student learning.

Expected Outcome

- Faster evaluation process
- Automated grading support
- Improved monitoring

BR-07: Student Progress Tracking

The system shall track student learning progress within enrolled courses.

Progress Indicators

- Completed lessons
- Assignment status
- Quiz performance
- Course completion percentage

Business Need

Students and instructors require visibility into learning progress and performance.

Expected Outcome

- Increased student engagement
- Improved learning management

BR-08: Communication and Notifications

The system shall support communication between instructors and students.

Communication Features

- Course announcements
- Notifications
- Discussion or messaging support

Business Need

Educational activities require timely communication and information sharing.

Expected Outcome

- Improved interaction
- Faster information delivery
- Better student engagement

BR-09: Administrative Management

The system shall allow administrators to manage users, courses, and platform operations.

Administrative Functions

- User management
- Course monitoring
- Content moderation
- Reporting and analytics

Business Need

The organization requires centralized operational control over the platform.

Expected Outcome

- Efficient platform administration
- Improved operational oversight
- Better reporting capabilities

Stakeholders

Stakeholder	Responsibility
Students	Participate in learning activities
Instructors	Create and manage educational content
Administrators	Manage platform operations
Organization Management	Monitor educational performance

Expected Business Benefits

- Centralized digital learning environment
- Improved accessibility to education
- Better student engagement
- Faster assignment and assessment management
- Improved tracking and reporting
- Enhanced communication

Conclusion

The proposed Learning Management System (LMS) will provide a centralized and scalable platform for managing digital learning operations. The system is expected to improve educational accessibility, streamline academic workflows, and support effective communication between students, instructors, and administrators.
